

K2 VIZIO PRO

INVISIBLE VIPER

K2 VIZIO PRO creates a hydrophobic coating on the glass and makes the rain drops flowing down - improving visibility and safety, even at lower speed, such as 45 km/h. Furthermore, it facilitates dirt removal and reduces frost build-up on the glass.

DIRECTIONS: Moisten the microfiber with the product and apply coating on the glass. Leave it for about 8-12 minutes and wipe with clean microfiber. For better result repeat the process and apply another layer after 20 minutes. Fully hardened after 8 hours of application.
